## 3 GOOD HEALTH AND WELL-BEING

### Sustainable Development Goal 3

*Ensure healthy lives and promote well-being for all at all ages*

#### Targets

- End preventable deaths of newborns and children under five years old
- End the epidemics of AIDS, tuberculosis, malaria, and combat hepatitis, water-borne diseases, and other communicable diseases
- Reduce by one-third pre-mature mortality from non-communicable diseases

## 6.3 million children under 5

die every year. More than half could be prevented with simple and affordable means

Leading causes are pneumonia, preterm birth complications, diarrhoea, birth asphyxia and malaria

## 75% decrease in measles deaths since the year 2000

this is due to an increase in vaccinations for children under 1 year old

However, there are still over **145,000** deaths annually, almost entirely in poor countries

## 300-500 million

people are infected with malaria every year

**580,000** people die every year from this preventable and curable disease

a person dies of malaria

**every 60 secs**

mostly African children

## 6 CLEAN WATER AND SANITATION

### Sustainable Development Goal 6

*Ensure access to water and sanitation for all*

#### Targets

- Achieve universal and equitable access to safe and affordable drinking water for all
- Achieve access to adequate and equitable sanitation and hygiene for all and end open defecation

## 2 million

deaths annually are attributable to unsafe water, sanitation and hygiene

**80%** of diseases in the developing world are caused by contaminated water

**9%**

of the global disease burden could be prevented by improving water supply, sanitation and hygiene

=

**\$7 billion**

in global health care savings per year

**320 million**

productive days gained globally for those in the 15-59 year age group
